08 February 2023

09:00 ч. – 12:00 ч. Visit of Kleptuza lake

Lake Kleptuza is the largest cross-type spring in Bulgaria - it is located on the right bank of the Chepinska River, near the Mountain slope in Chepino district, Velingrad. The park of the same name, together with its two lakes, is a symbol of the city. A large part of its water is used for drinking purposes, and the rest forms two lakes that flow into the Chepinska River, and then into the Maritsa River and the Aegean Sea.
