In your opinion, what is the most essential to do as next steps to enhance integrated drought management at national and/or regional level?

Please rank in order of importance.

What should be the focus of a potential "next" drought event

Please share your key take away from this workshop or final comments/suggestions

“We need more information on groundwater drought in the region”

“Drought forecast”

“Promote what exists, so that we don’t re-invent the wheel”

“Use existing knowledge”

“Debates for effective monitoring that helps with policy”

“Cooperation - policy with academy and take into account voice of endangered stakeholders”

“Overall European framework is needed, to streamline all national efforts”

“Shift from crisis management to prevention”

“Communication between stakeholders, authorities and also public”

“Support to preparation of Drought Plans at different levels”

“Cooperation to connect monitoring to measures”

“Need to build the economic case for action”

“Communication is key”

“Further work important”

“Integrated water management”

“Policy work”

NEXT STEPS

1. All presentations will be made available on the [event page](#)
2. The Background Report will be updated and circulated to include lessons learned from the workshop
3. Next week: [DWP KnowNow](#) – on Extreme events, September 29
4. The discussion will continue at the [Danube Water Conference: “Building a Resilient and Water Secure Danube Region”](#), October 18 – 20
5. Lessons and feedback from the workshop >> Priority action items
